B-Tech launch new heavy duty projector mount

AV Manufacturer of the Year B-Tech AV Mounts has launched a new projector mount, purposely designed for today's larger, heavy duty projectors.

B-Tech's latest mount, the BT893, can cater for projectors up to 70kg and can be mounted to ceilings directly or with B-Tech's 50mm pole system for suspended installations. The BT893 boasts easy adjustment to tilt, yaw and roll - allowing for perfect projector alignment. Also featured is tried and trusted micro-adjustment technology borrowed from their installer favoured BT8310 video wall mount, for precision alignment of projected images. Micro-adjustment is altered using handwheels for better grip and a more controlled adjustment.

Suitable for today's live event and staging applications, as well as large scale projection mapping use, the BT893 has been developed with input from some of the world's largest projection manufacturers. Mark Walker, business development manager for B-Tech, said: "Projection mapping for large scale projects requires heavyweight hardware and, with the BT893, we have a projector mount that is purposely designed for such products. With the option of ceiling or pole mounting, integrators can get the perfect installation with minimal hassle. We even supply optional extension legs which can be used to accommodate larger fixing patterns."

He added: "We had a working demo at ISE this year and we received positive feedback from our stand visitors, particularly for the micro-adjustment function - important for perfecting today's large-scale projection requirements."

The BT893 is available now from stock, with all mounting hardware included. Contact your B-Tech representative for more information.
